

DIRT M.D.™

NEXT GENERATION HUMIC PRODUCT

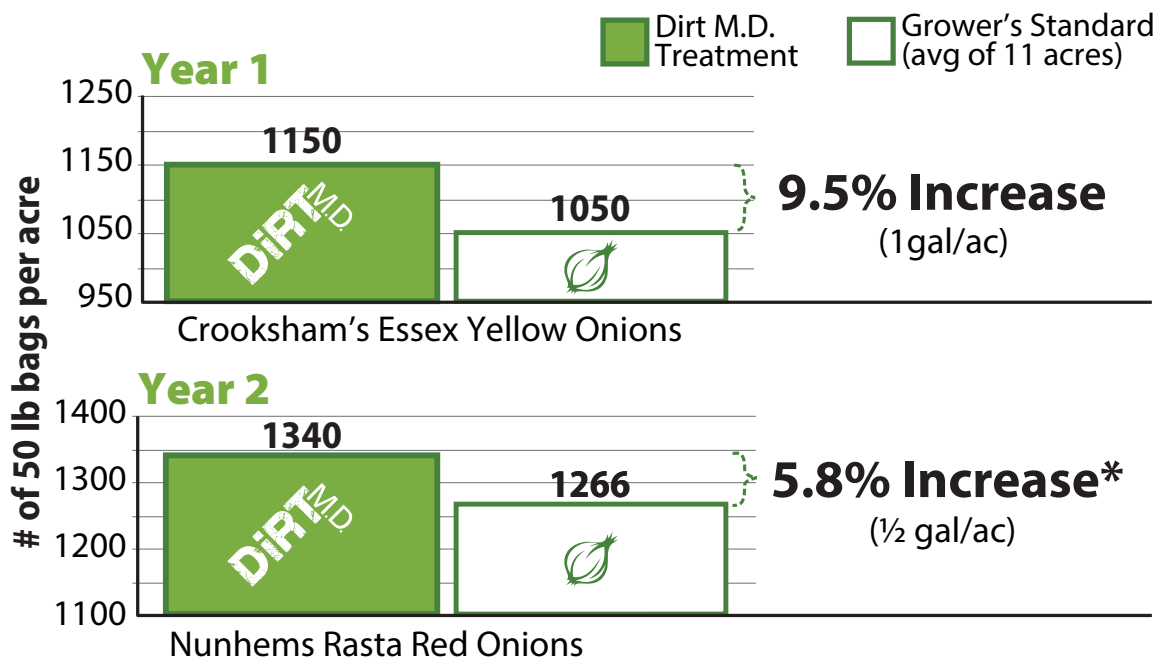

A next generation liquid humic product that gives growers the most out of their fertilizer regimen through humic and fulvic acids that bind ions, micronutrient complexes to avoid deficiencies, and a highly reactive formula to do more with less.

How is Dirt M.D. Unique?

- 4.5% Humic Acid & an additional 2% of plant penetrating Fulvic Acid
- Contains Ammonium Humates - more reactive form of humic
- High quality formulation - contains surfactants (anionic and nonionic), micronutrient complexes, plant sugars, and soil bacterium
- No animal-based ingredients
- Leaves no residue - ideal for Drip and Foliar applications

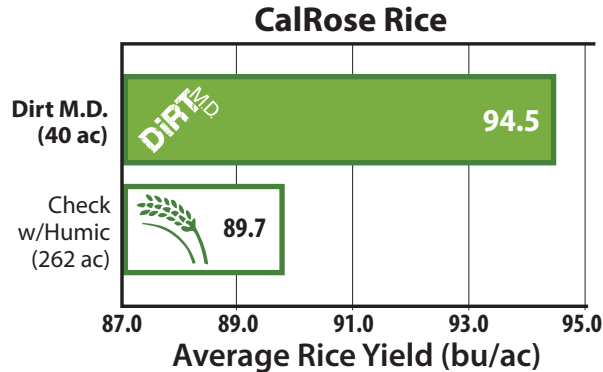

Dirt M.D. Field Trial Results

Dirt M.D. consistently increases yields in Short-Day Onions

*Year 2 plots suffered from a major windstorm 20 days before harvest leading to premature laying of onions impacting size and yield (noted by farmer).

Dirt M.D. Field Trial Results Continued

Dirt M.D. out-performed HydraHume® with a yield increase of 5% in CalRose Rice

Testimonials from Farming Professionals

"I use Dirt M.D. on perennial artichokes and have seen an *improvement on plant health*, and increased yields. Dirt M.D. was *easy to incorporate* in my farmer's growing system and has helped *promote increase in artichoke's size.*"

José Aguilar
PCA - Salinas Valley

"With today's increased environmental awareness we as crop consultants need to incorporate humic/fulvic products like *Dirt M.D. for increased cation exchange capacity.*"

José Ramirez
Crop Advisor

Dirt M.D.'s results are so impressive; we want you to see them first hand. Currently we have offers for farmers and farm advisors to try Dirt M.D. at special rates.

"We have been really happy with Dirt M.D. and have adopted it into our full system. It has *helped us get the most out of our fertility program.*"

Leandro Mora
Operations Manager - Pro Growers, Inc

"[The Dirt M.D. plot was] tied for the highest on the ranch... it went down flat and I mean flat, so I can only say we need to lower the rate of N because *the use efficacy is higher than my standard.*"

Seth Fiack
Rice Farmer

Brassica - 53 days post germination
