

DIRT M.D.™

# DIRT M.D.™ TRIAL REPORT: NEW MEXICO CHILE

## INTRODUCTION

**DIRT M.D.** is a liquid nutrient energizer powered by **humic acid**. It turns knowledgeable growers into successful ones, by **boosting the power of nutrients** to produce a great yield of a healthier and higher quality crop.

Developed in India over 30 years ago and used successfully by farmers throughout India, it was launched in the U.S. in 2012. Our source has been **the same freshwater lignite deposit since 1970**.

This report details field trial findings conducted by **Cassel Keeler** at Keeler Farms on green chile in **Luna County, NM** in 2016.

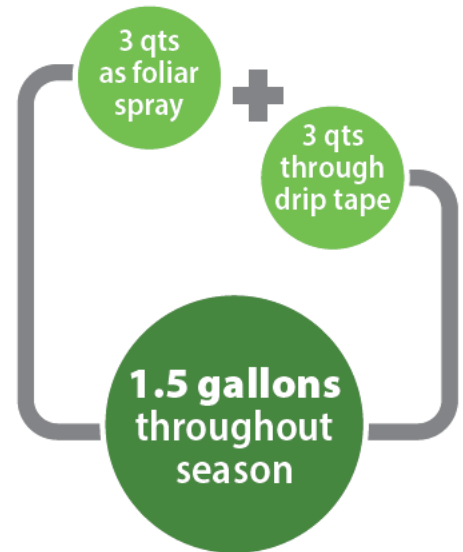

## METHODS

DIRT M.D. was tested on 4 different farms (same county) on **20 acre blocks**. All trials results were drawn from **side-by-side blocks** totaling to 100 acres of treated and the same as untreated. A total of **1.5 gallons of DIRT M.D.** was applied throughout the growing season as **foliar** and through the **drip tape**.

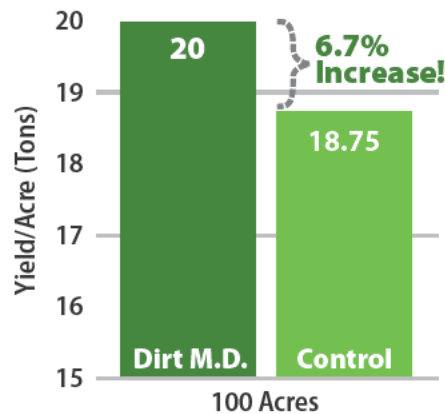

## RESULTS & CONCLUSION

DIRT M.D. was always applied in addition to fertilizers or other foliar sprays. "It seemed that by using DIRT M.D., the plant(s) **better absorbed the applied nutrients**. We noticed the **DIRT M.D.** treated fields were **healthier** compared to test plots and also saw a **yield bump** of about a 1 ton per acre overall."

## APPLICATION DETAILS

## DIRT M.D. vs. Control

**"We tried it on onions and with RoundUp sprays and were impressed with the results on all our crops! [We] will definitely be working with DIRT M.D. next season."**

– Cassel, COO of Keeler Farms
